

MINI
ELECTRIC[®]
ACADEMY

LESSON 03

THE

EXCHANGE
PROGRAMME

Open to all petrolheads curious about making the switch to electric vehicles.

Get answers to burning questions, like...

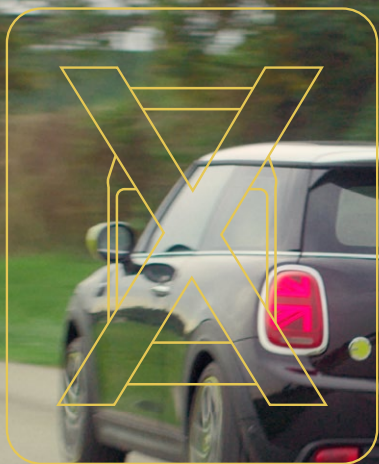

**IS AN EV
SLOWER OFF
THE LINE?**

The answer is,
yes — if there is a jam holding
up traffic.

TRAFFIC

270 N.m

**INSTANT
TORQUE**

Otherwise, the MINI Electric easily beats most petrol cars off the line thanks to its instant torque.

**THE ACCELERATION
IS ALSO
BUTTER-SMOOTH**

in

No lag and no gearshift
interruptions

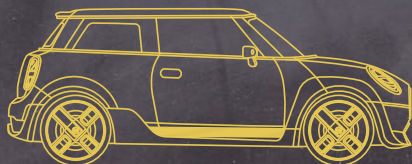

184ps

OF HORSEPOWER

A TAD MORE
POWERFUL THAN
THE COOPER S!

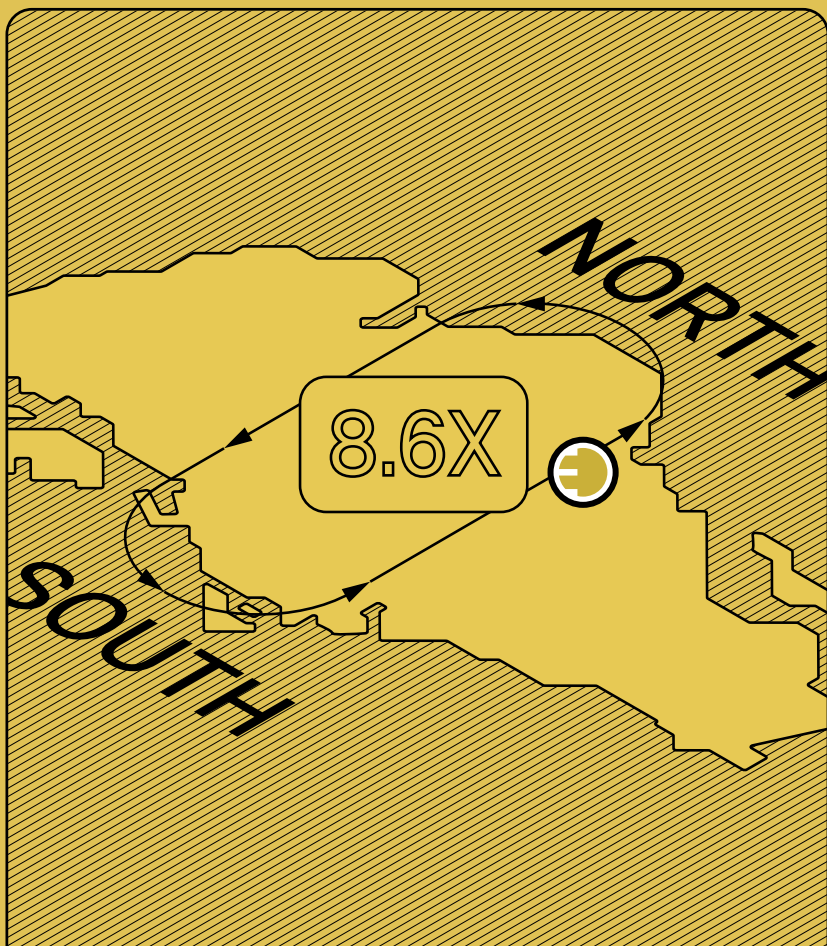

Then there's the question of range.

How far can
you drive
in an EV?

The MINI Electric is in fact a cross-country vehicle — as long as the country we're talking about is the size of Singapore.

A single charge takes you up to 232* kilometres, about **8.6** trips all the way North to South or vice versa.

*Range measured according to WLTP test cycle, and may vary in real life

One last myth to bust
before the end of this
lesson...

Will my EV
attract lightning
strikes
during thunderstorms
? ? ?

NO!
